Nominated market operator:

1) ensures equal conditions for participation in trading on the coupled day-ahead markets and the coupled intraday markets;

2) applies the minimum and maximum prices for the single day-ahead and single intraday market coupling established for the bidding zones of European Union Member States and/or Contracting Parties to the Energy Community in accordance with European Union legislation;

3) ensures the anonymity of market participants' orders and their transmission:

to a nominated market operator performing the function of the single day-ahead and/or single intraday market coupling operator, in the event that such function is delegated to a third party; or

to nominated market operators and other market participants from Energy Community Contracting Parties and/or European Union Member States involved in single market coupling;

4) accepts bids from market participants; ensures the checking and verification of trading results within the single day-ahead market coupling and single intraday market coupling; informs market participants and the transmission system operator of trading results; and publishes other information regarding trading, including prices and volumes of electricity purchases and sales, among other details;

5) acts as a central counterparty for the purpose of clearing and settlement of electricity purchase and sale transactions resulting from trading on the single market coupling;

6) implements, jointly with the transmission system operator and the relevant nominated market operators and transmission system operators of other European Union Member States and Energy Community Contracting Parties, fallback procedures for cases where day-ahead and intraday market coupling results are unavailable or cannot be obtained;

7) provides the Regulator with information necessary for the exercise of its functions and powers in accordance with the law;

8) provides the Regulator with a forecast and other information regarding the costs of ensuring the operation of the single day-ahead market coupling and the single intraday market coupling;

9) ensures the confidentiality of information received from market participants—which it uses to perform its functions in the electricity market and which constitutes a trade secret—in accordance with legal requirements, and also ensures the confidentiality of information regarding its own activities, the disclosure of which could provide commercial advantages to market participants;

10) applies pan-European rules, the application of which is mandated by Energy Community legislative acts in the energy sector and/or decisions of the Energy Community Ministerial Council, the list of which is approved by the Regulator;

11) participates in the development of regional and national rules governing the operation of the single day-ahead and single intraday market coupling;

12) performs other functions and tasks necessary to ensure the single coupling of day-ahead markets and the single coupling of intraday markets, as provided for by this Law and other regulatory legal acts, including Energy Community legislation in the energy sector.

Nominated market operator when performing the function of the single market coupling operator:

1) develops, maintains, and applies the algorithms, systems, and procedures necessary for the operation of the single day-ahead and/or single intraday market coupling;

2) processes input data on inter-zonal capacity and capacity constraints provided by the transmission system operator;

3) uses a price-coupling algorithm to determine trading results in the single day-ahead market coupling—specifically the price, the net position for each bidding zone and settlement period, and the information required to determine the execution status of orders;

4) uses a matching algorithm within continuous trading to determine trading results in the single intraday market coupling—specifically, transaction prices, net positions for each bidding zone and settlement period, and the execution status of trade orders;

5) verifies and sends the results of the single day-ahead market coupling and single intraday market coupling to transmission system operators and nominated market operators of European Union Member States and/or Contracting Parties of the Energy Community.
