The volume of electricity sales in the trade zone of "IPS of Ukraine" thousand MWh

In 2022:

- **95.418 million MWh** of electricity were produced;
- 17.4% of the total sales on the electricity market were sold at DAM, **2.3%** at the intraday market, and **80.3%** under bilateral contracts;
- In 2022, the proportion of UEEX's share of trading in relation to DAM + IDM was **80.3%** to **19.7%**.

Increase in the number of auction participants

Year	UEEX participants number	% growth
2020	305	60
2021	415	36
2022	500	20
2023 10 months	532	6

In 2021, the proportion of UEEX market share in relation to DAM + IDM is 70,7 % to 29,3 %

BASIC FRAMEWORK OF THE PROJECT

1. Ukraine imports and exports electricity from **Moldova** and EU countries. For 2022, the volume of imports amounted to 3,814 MWh, exports - 2,541,900 MWh. In particular, by directions: **Poland** (import 0 MWh; export 1079708 MWh), **Slovakia** (import 3627 MWh; export 461568 MWh), **Hungary** (import 0 MWh; export 192840 MWh), **Romania** (import 0 MWh; export 339925 MWh), **Moldova** (import 187 MWh; export 467859 MWh).

2. From October 3, 2022 to April 2023, a ban on the export of electricity was in effect in Ukraine due to Russian strikes on the energy infrastructure. **For 11 months of 2023,** the volume of imports amounted to 578,241 MWh, exports - 371,328 MWh. In particular, by direction: **Poland** (import 19528 MWh; export 53370 MWh), **Slovakia** (import 456512 MWh; export 150052 MWh), **Romania** (import 21099 MWh; export 14698 MWh) .), **Moldova** (import 81102 MWh; export 153208 MWh).

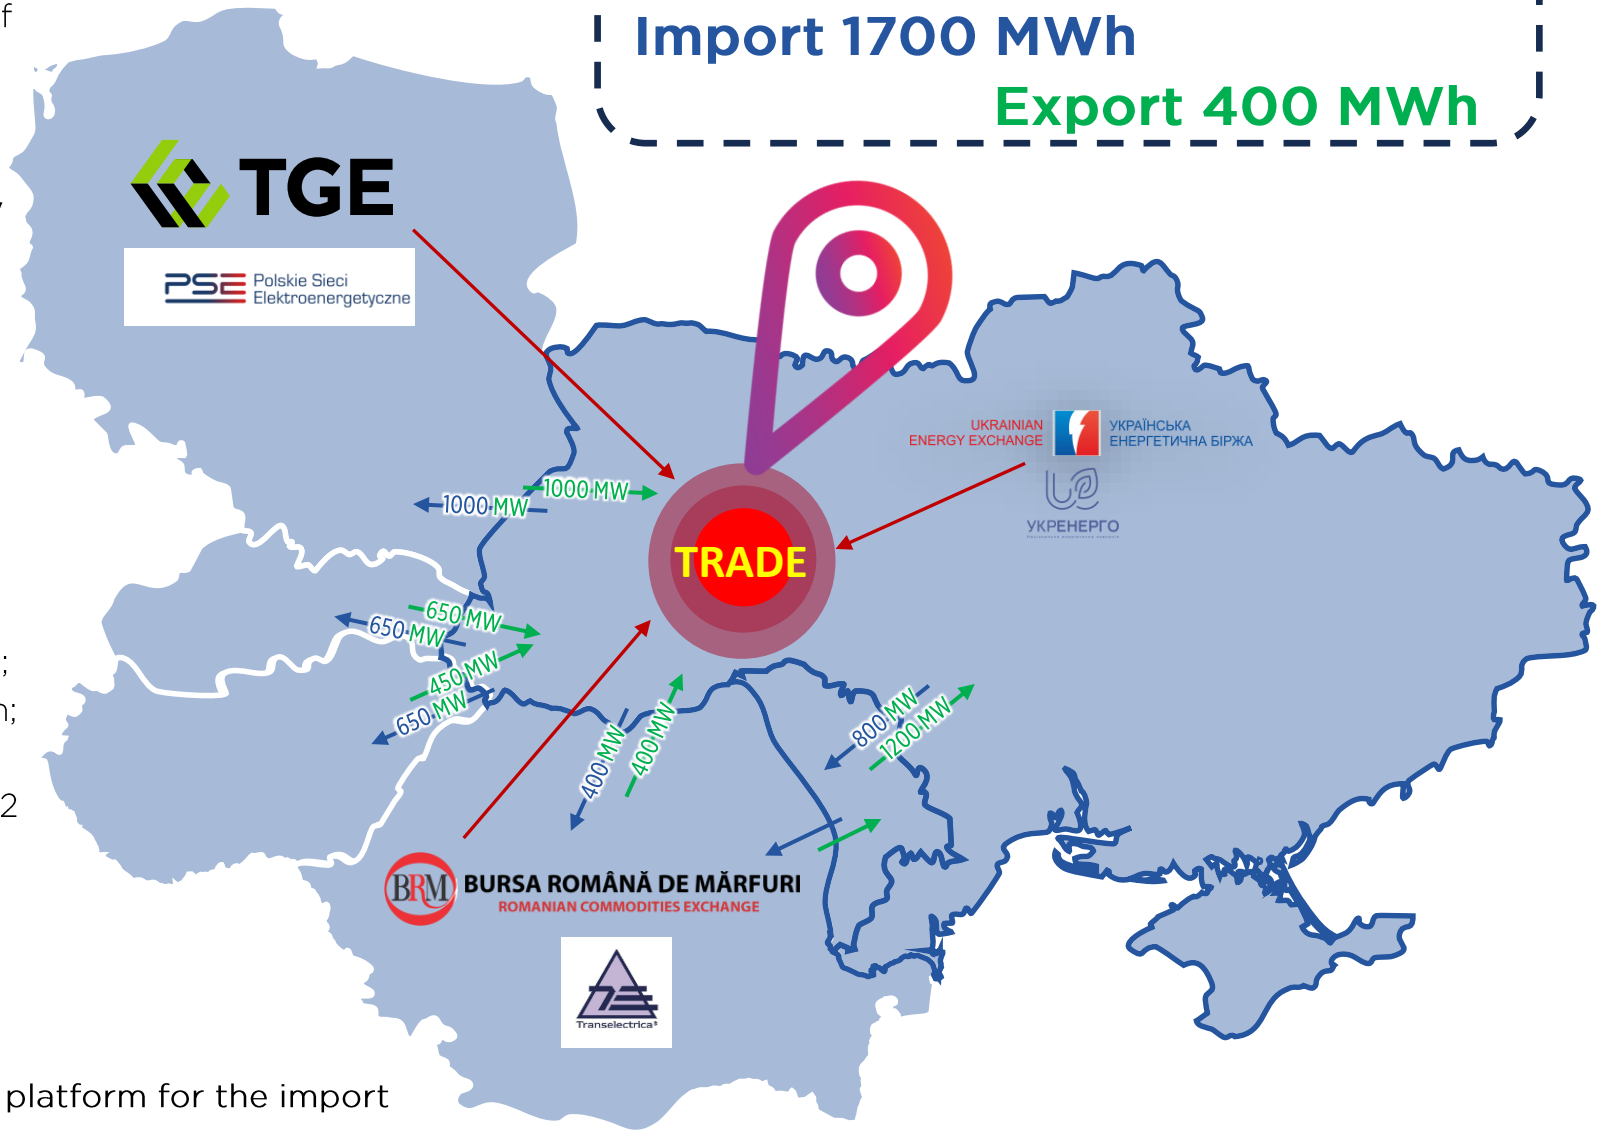

3. Until now, cross-border trade under bilateral contracts has not been organized, and participants are limited in the ways of finding counterparties.

4. The project envisages the launch of an electronic platform for the import and export of electricity to/from Ukraine.

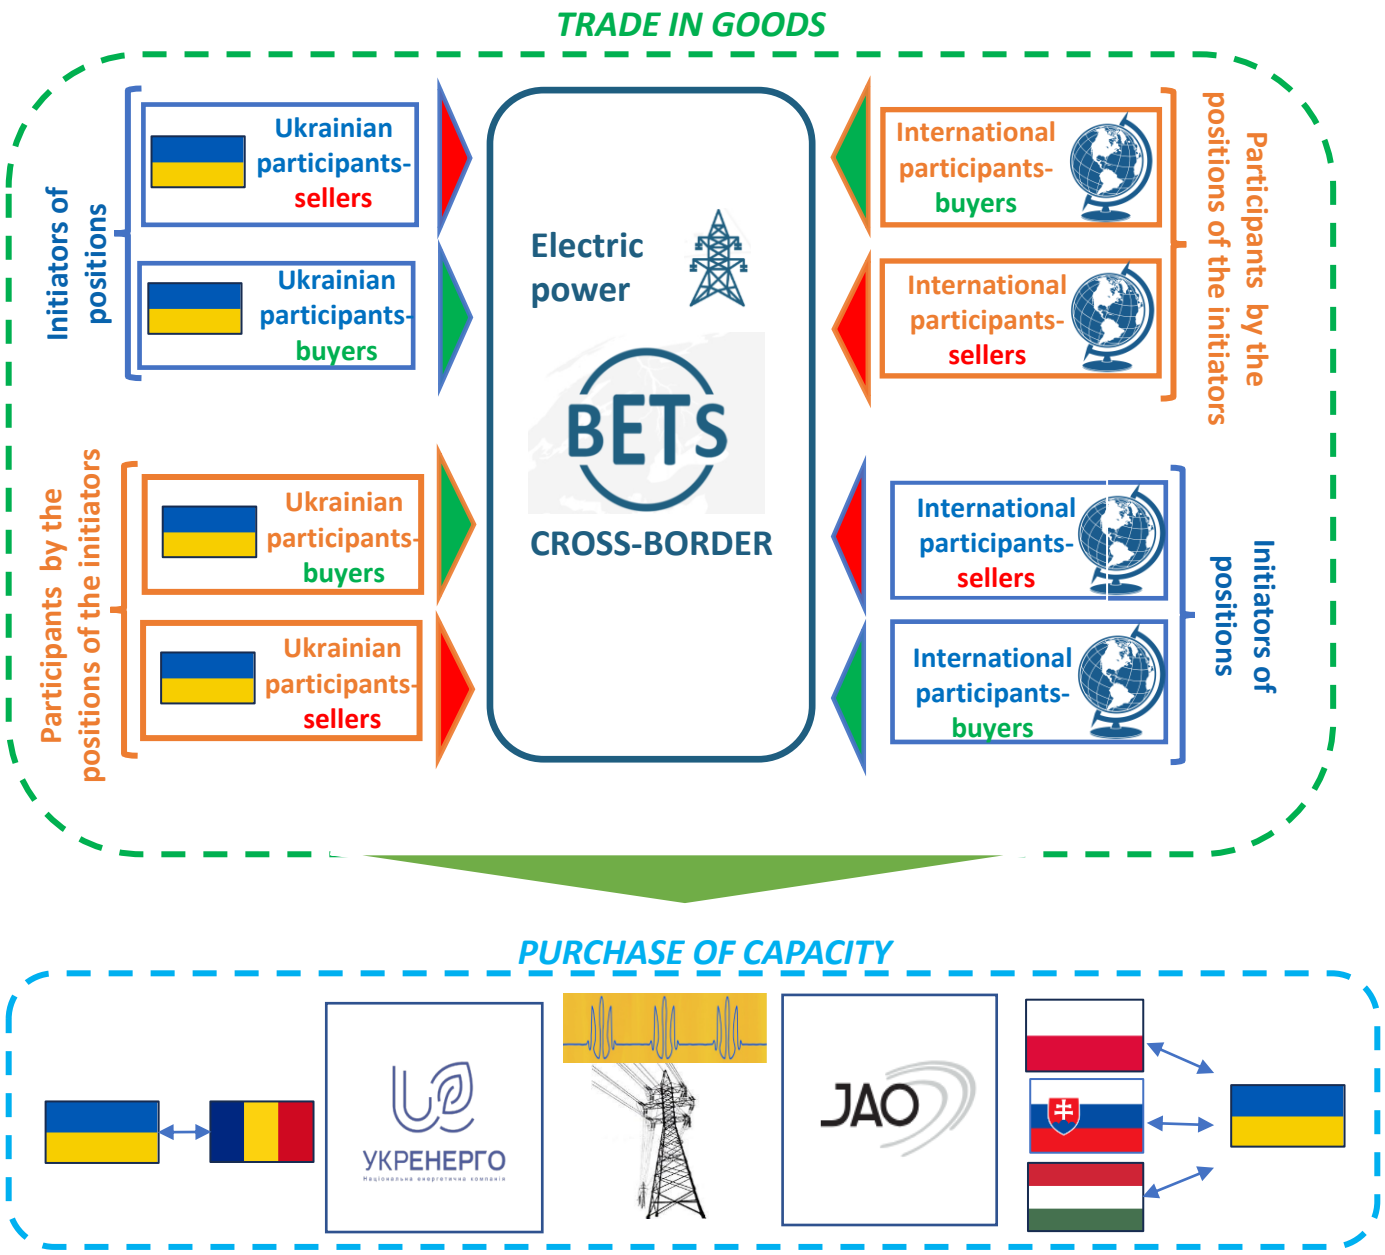

Currently, the permitted capacity for the trade zone (Ukraine and Moldova) is:

Import 1700 MWh

Export 400 MWh

Centralization of cross-border operations with electricity

1. Any participant who plans to import electricity to Ukraine or export it from Ukraine can get access to the BETS CB.
2. BETS CB operates on the territory of Ukraine and is administered by UEEX. Ukrainian legislation applies, including regarding access.
3. All participants must pass the UEEX accreditation procedure in accordance with Ukrainian legislation.
4. Both buyers and sellers - residents and non-residents of Ukraine - can initiate the auction (put positions). Other participants can participate in the auction for these positions.
5. After concluding exchange agreements, the parties independently purchase transmission rights (power) at the relevant auctions.

Phased implementation of the project in terms of guarantee contributions

Due to currency restrictions in Ukraine, we propose to launch the project in terms of guarantee fee (GF) in three stages

I STAGE
deposit of guarantee fee is not provided

Since some participants need to implement the initiative quickly, and the integration of systems for exchange of information on the amount of collateral takes time, it is proposed to launch the process at the auction level in the first short stage without entering the GF.

II STAGE
making a guarantee fee without applying penalties

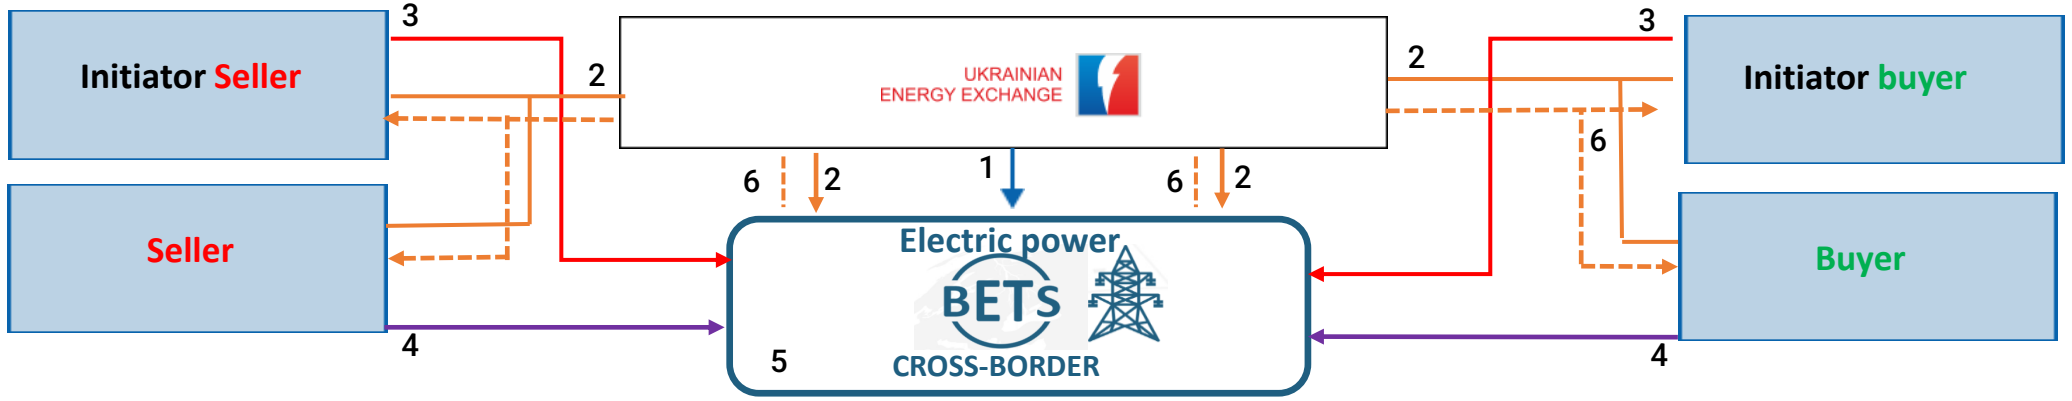

Until the restrictions are lifted, the UEEX will not be able to transfer the GF to the affected party in the form of a fine. The stage can be implemented in the form :

GF are submitted by all parties, that are unblocked after signing the agreement (risk of impossibility of applying sanctions).

III STAGE
depositing a guarantee fee as a guarantee of the conclusion of the agreement

After the complete removal of all currency restrictions, the parties can agree on a full-fledged guarantee mechanism.

Procedure for interaction

1. Exchange ensure that participants are admitted to the system through the UEEX accreditation mechanism.
2. Participants pay a guarantee fee, according to which the limits are set in BETS BC (for the stages where applicable).
3. Initiators (within the limits of the guarantee fee (for the stages where applicable)) submit orders (place positions) for purchase or sale.
4. Participants (seller and buyer) submit bids (apply) for the initiators' positions within the guarrantee fee (for stages where applicable).
5. At a certain time, BETS BC conducts unilateral counter-auction trading and issues exchange certificates on the basis of which the parties enter into foreign trade sales contracts.
6. After the auction, guarantee fee of the bidders who did not enter into transactions are unblocked or the guarantee fees that are not subject to transactions are partially unblocked. For Phases II and III, the guarantee fees of the parties of the exchange transaction are unlocked after confirmation of the sale and purchase agreement.

Depending on the stage of the project, different approaches to the application of penalties and transactions with guarantee fees are applied.

Settlements under sales contracts are provided by the parties independently.

Benefits of participating in BETS BC

- Corresponding Resolution of the Cabinet of Ministers No. 1127 of October 27 "On the Approval of the Regulation on the Special Features of the Import of Electricity in the Conditions of the Martial Law Legal Regime" allows not to apply measures to forcibly restrict electricity supply to those consumers who will import (during October - April) 50% of their consumption . PP BETS enables more importers to access the resource and avoid outages.
- Facilitation of the search for potential counterparties. All information is transparent and public, which allows you to identify possible abuses, give analytical conclusions and comparisons, and form price indicators.
- Consolidation of demand and supply for the formation of correct market signals.
- Access of non-residents to the Ukrainian market.
- Exchange auctions allow to reduce corruption risks and shady schemes, which is especially important for Ukrainian state-owned enterprises.

Timing of auctions

Auction process:

- Posting a position
- **Registration of applications for participation in the auction - from the moment the session is created until the end of the bidding period**
- Торги
  - **The main period**– ends no later than 1 hour after the beginning of the trading period (no later than 18:00).
  - **Additional period**– ends no later than 1 hour after the start of the additional period (no later than 18:00).
- Signing certificates

Trading sessions schedule

Working days in accordance with the legislation of Ukraine

Trading session - from 11:00 till 12:00 (time does not take into account the possibility of extending the trading session)

Signing certificates - within 2 (two) hours from the end of the trading period

Auctions are held at a specified time on working days

Description of the software product

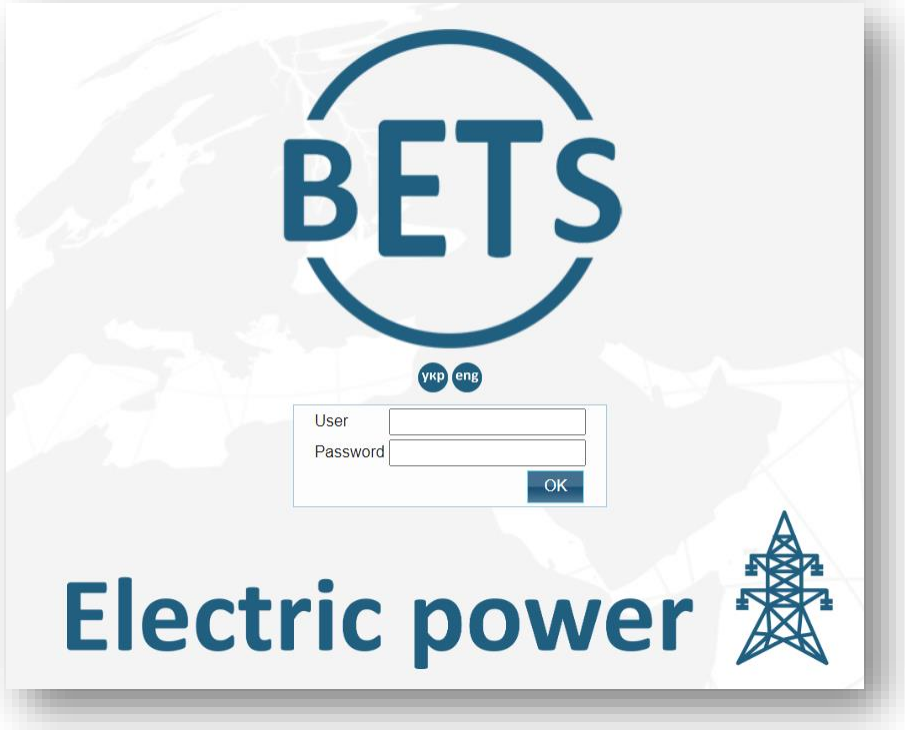

The software product "Exchange Electronic Trading System" in the version "Electric Power" (hereinafter - PP BETS) is intended for conducting electronic auctions for the sale of electricity under bilateral contracts by remote users in real time via Internet communication channels.

Access to PP BETS is possible through the user's Internet browser from a computer or mobile phone.

The client part of PP BETS allows the user to:

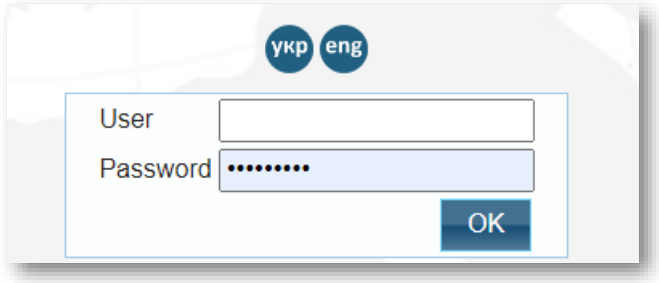

- view information about auctions;
- post (edit, delete) positions for the sale of electric energy;
- submit (edit, delete) applications for participation in the auction;
- participate in auctions;
- view and download resulting documents and analytical materials;
- all actions are signed with an electronic signature.

Address of PP BETS on the Internet:
https://epbets.ueex.com.ua

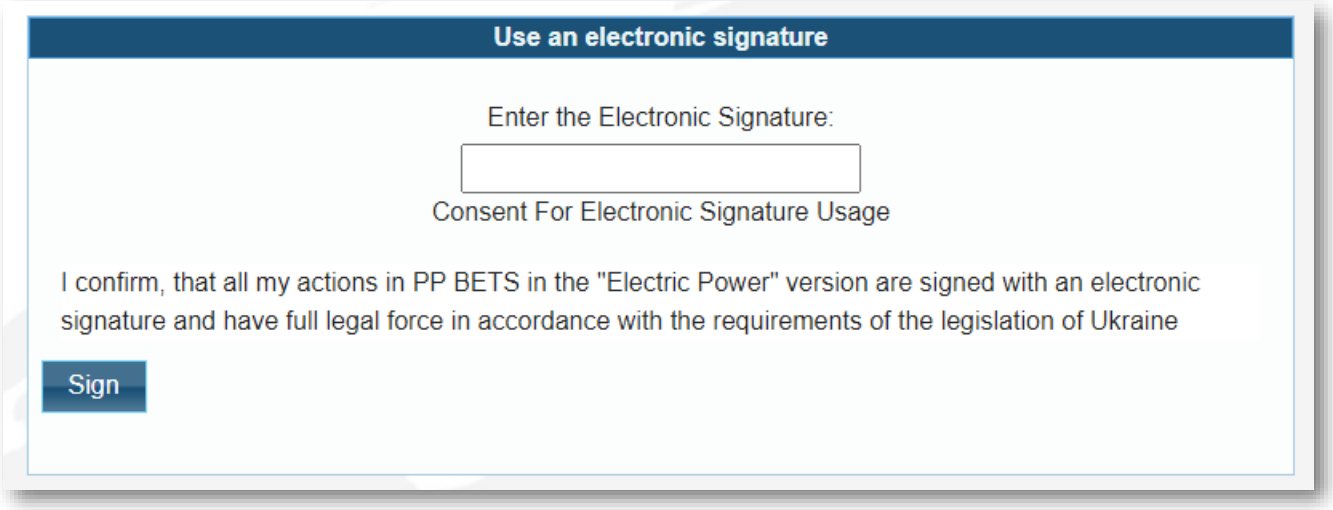

User login and verification using a qualified electronic signature (QES)

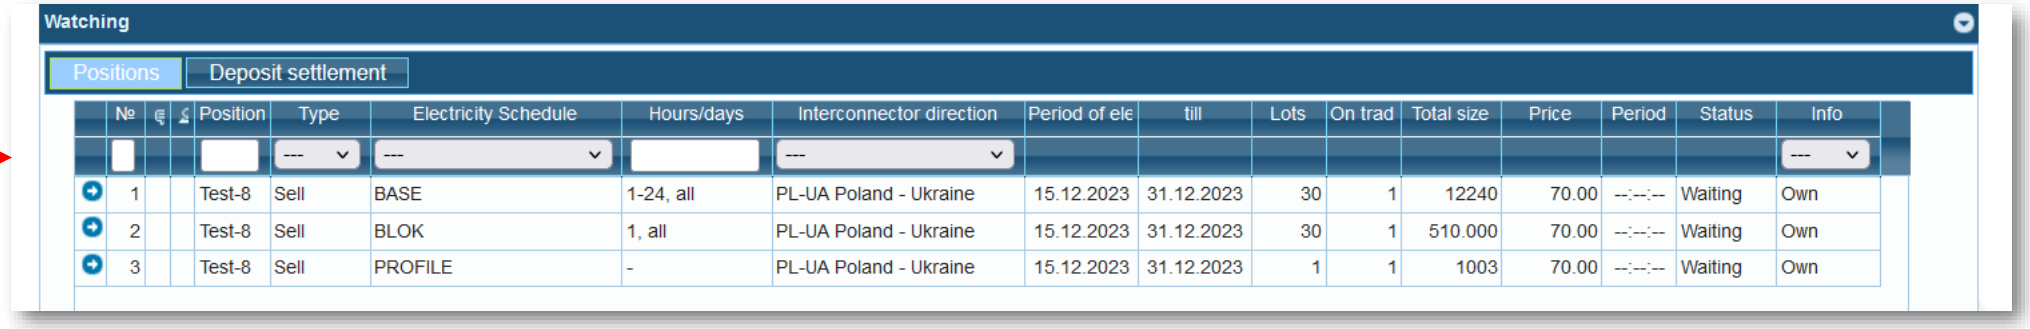

Selection of the language version and the user registration page containing the "User" and "Password" fields

When downloading the PP BETS, a window appears in which the user needs to confirm with the help of a qualified electronic signature (QES) that all his further actions at the auction will be signed with a qualified electronic signature (QES) and will have full legal effect

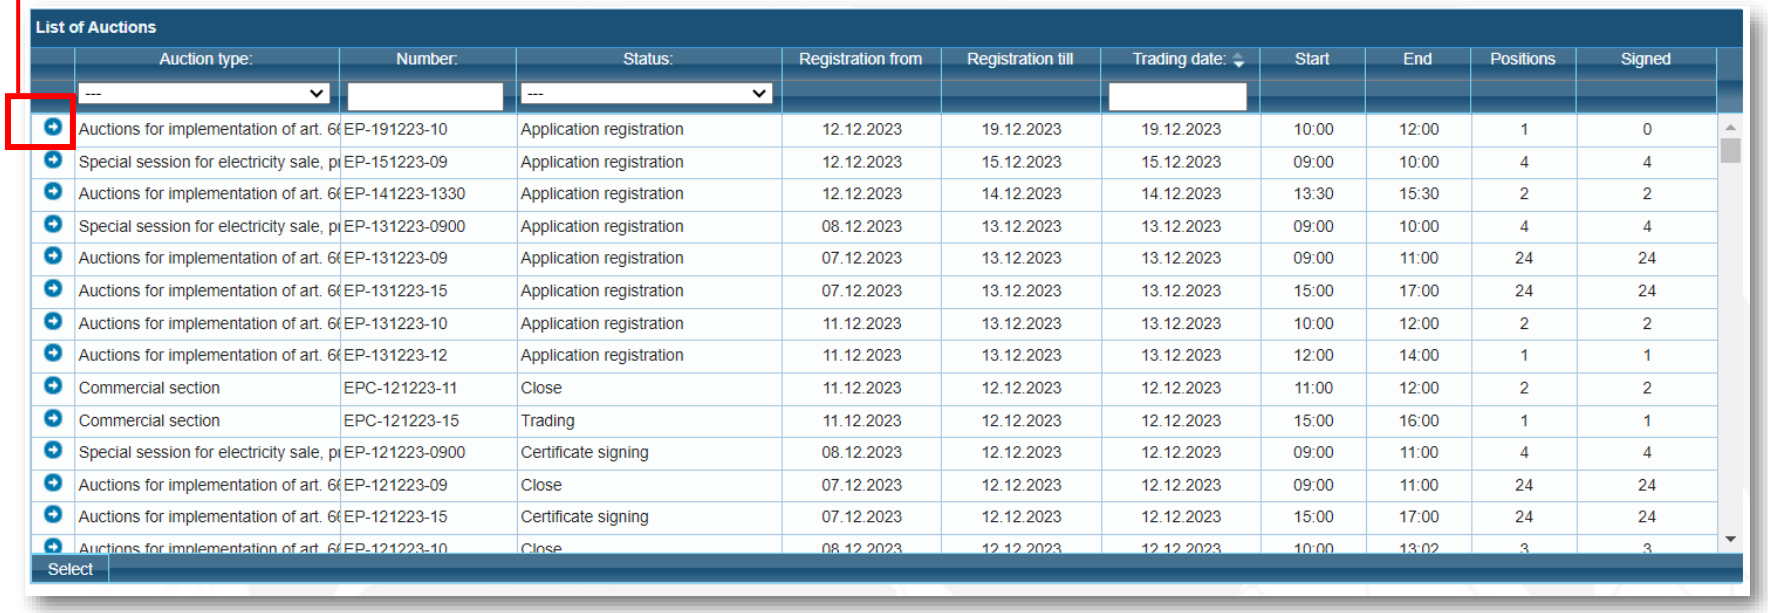

Viewing the list of auctions and items placed on them

Select

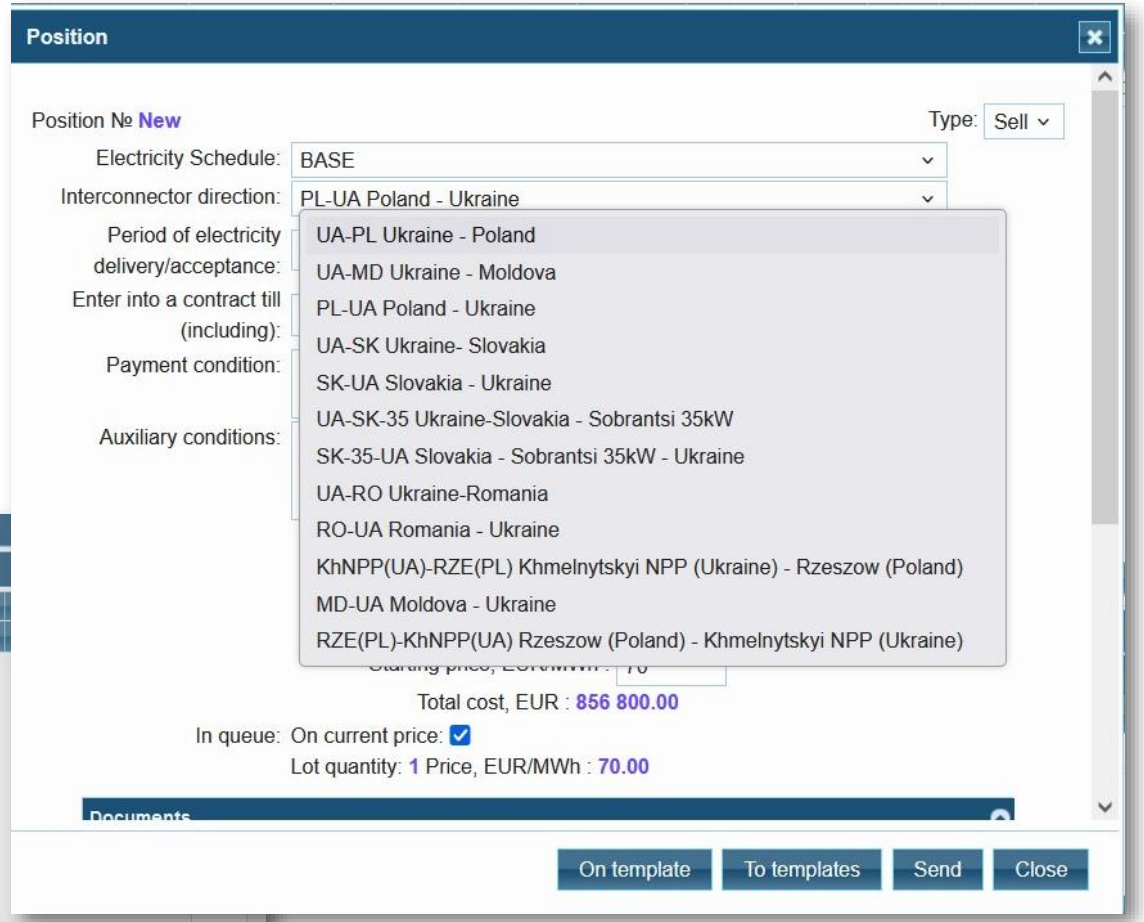

An unlimited number of initiators (sellers and buyers) can place an unlimited number of positions at one auction. Also, an unlimited number of participants can trade on these positions. Participants can apply for any of the auction items.

Posting a position(1/3)

Preparation and submission of new positions is possible during the "Registration of applications" period.

An application for placing a position within the auction is entered in the PP BETS in the form of a position (positions) for sale and/or purchase in open trading sessions in the PP BETS .

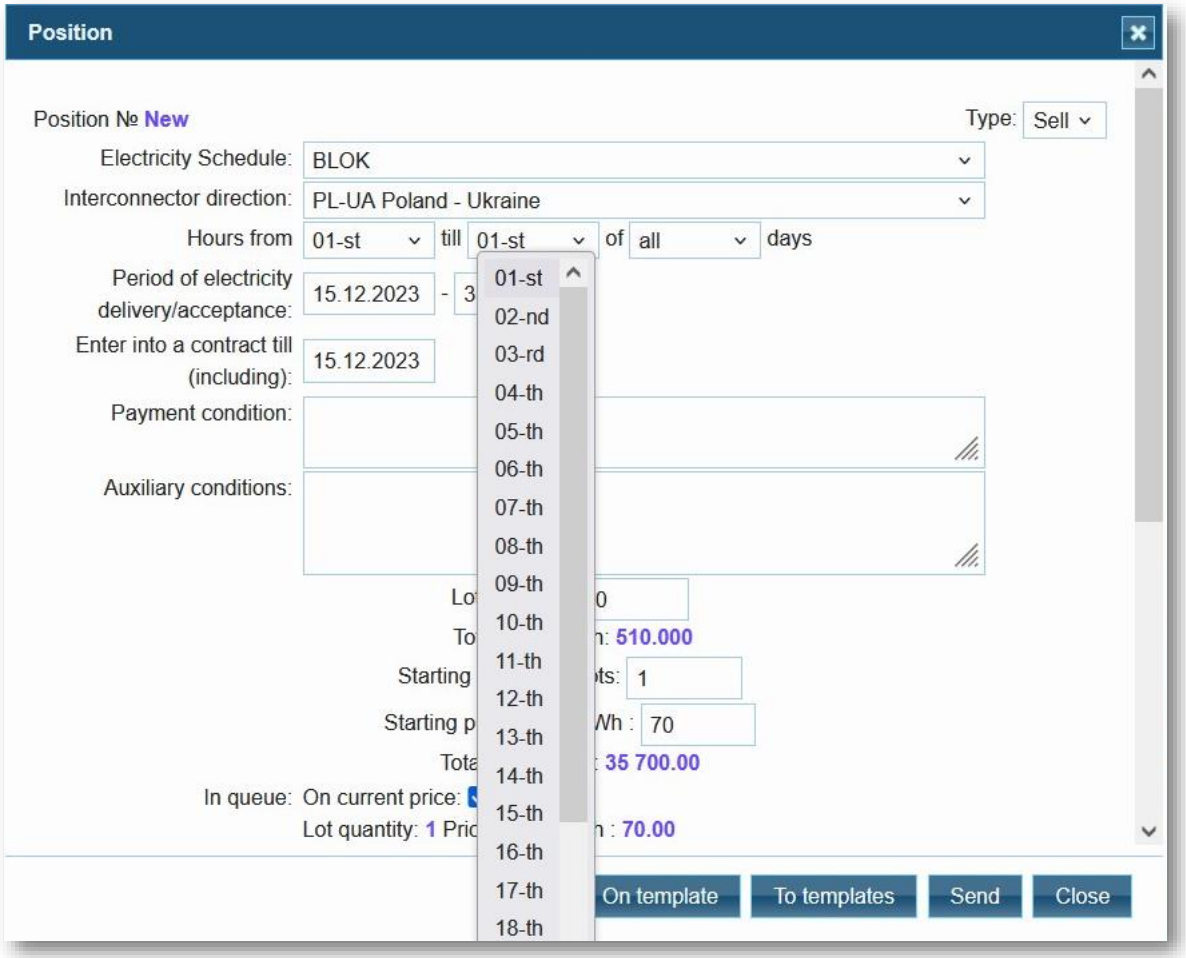

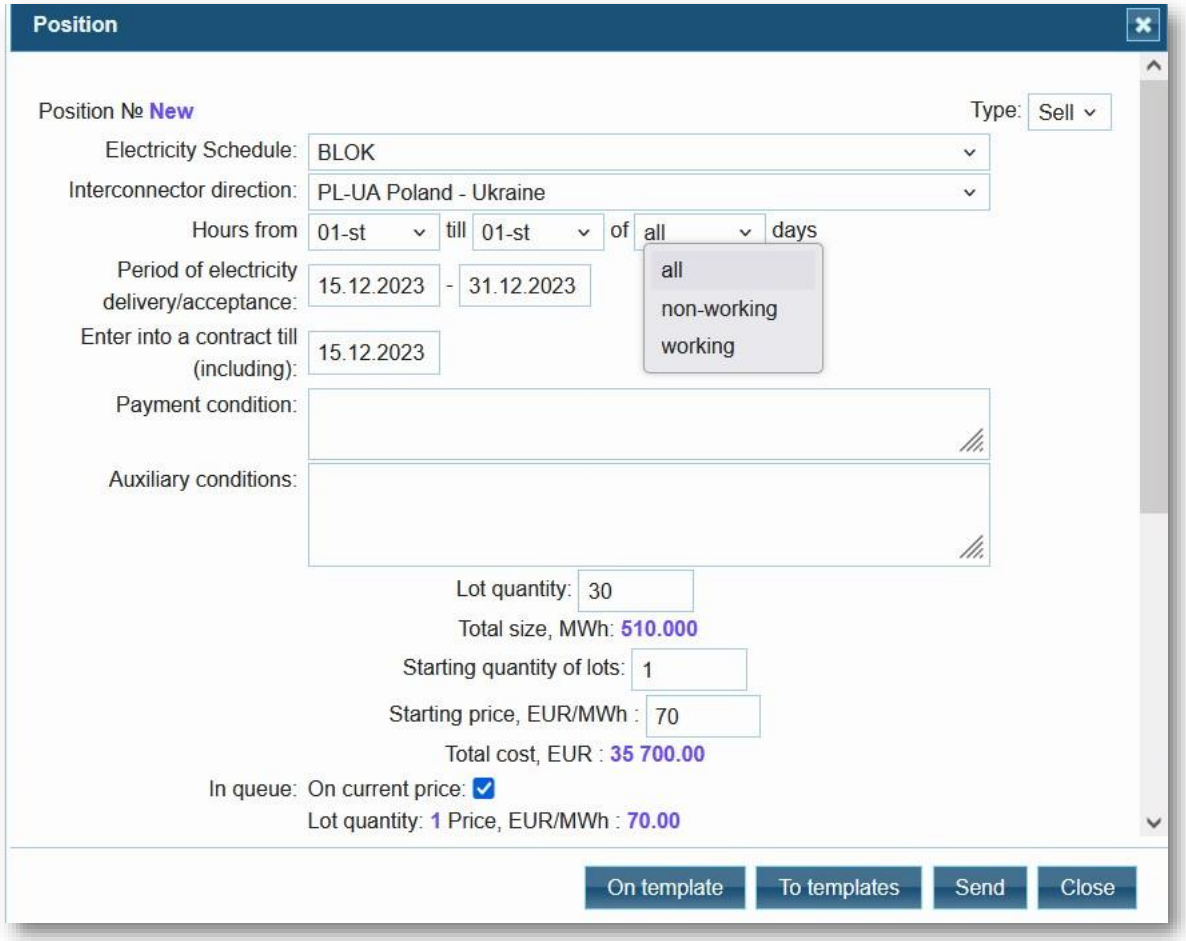

1 лот = 1 МВт
Крок аукціону 0,1 євро

Posting a position(2/3)

The seller fills in the position card, which combines lots with the same terms of execution - the starting price (for 1 MWh), the sales schedule, the period of release/selection of electricity, as well as payment terms and other significant terms.

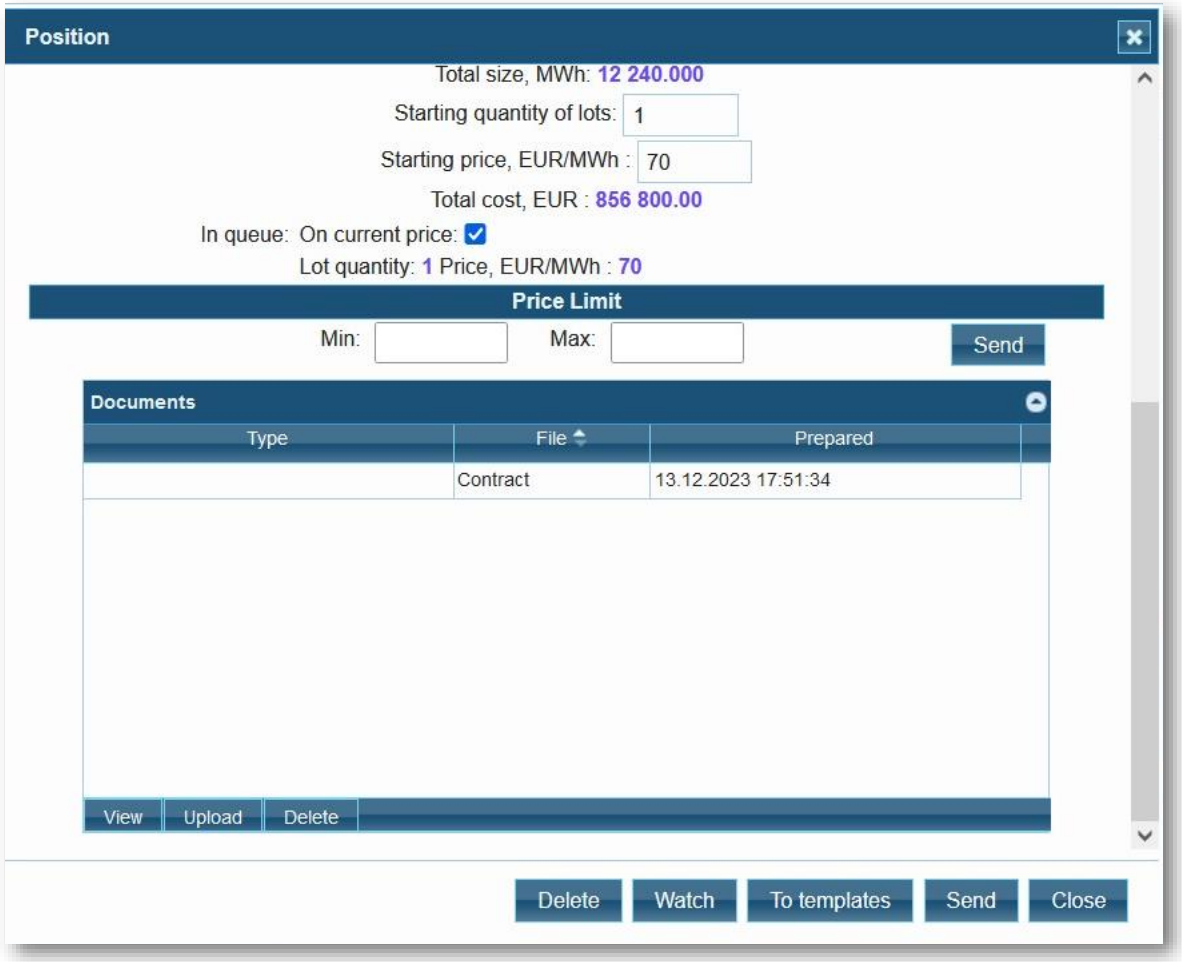

Posting a position (3/3)

Addition to the position of the project of the bilateral contract of purchase and sale of electricity.

The participant can download his contract or use the form recommended by the auction regulations.

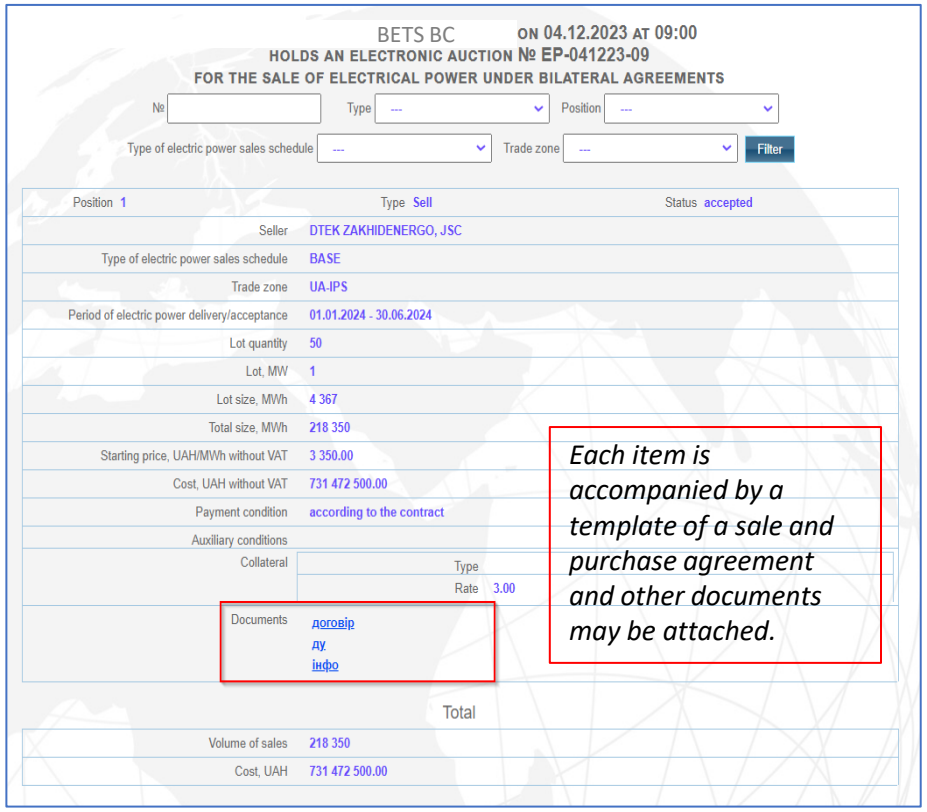

The position entered in the PP BETS must be signed with an electronic signature no later than 24 hours before the start of the auction.

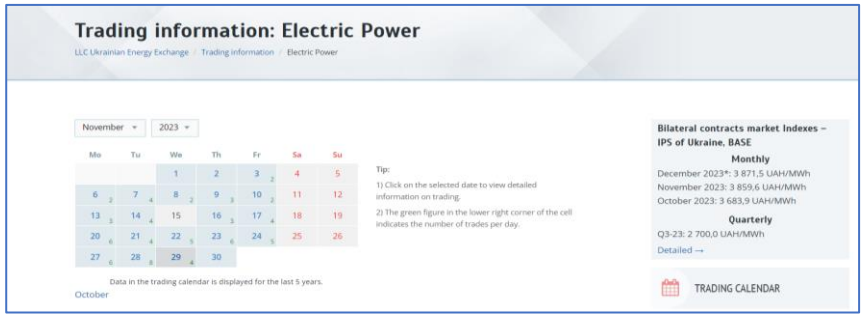

Publication of an auction announcement

After submitting positions for the auction, each exchange provides prompt information about this on its websites.

Registered participants of the section receive direct address information about the positions put up for auction.

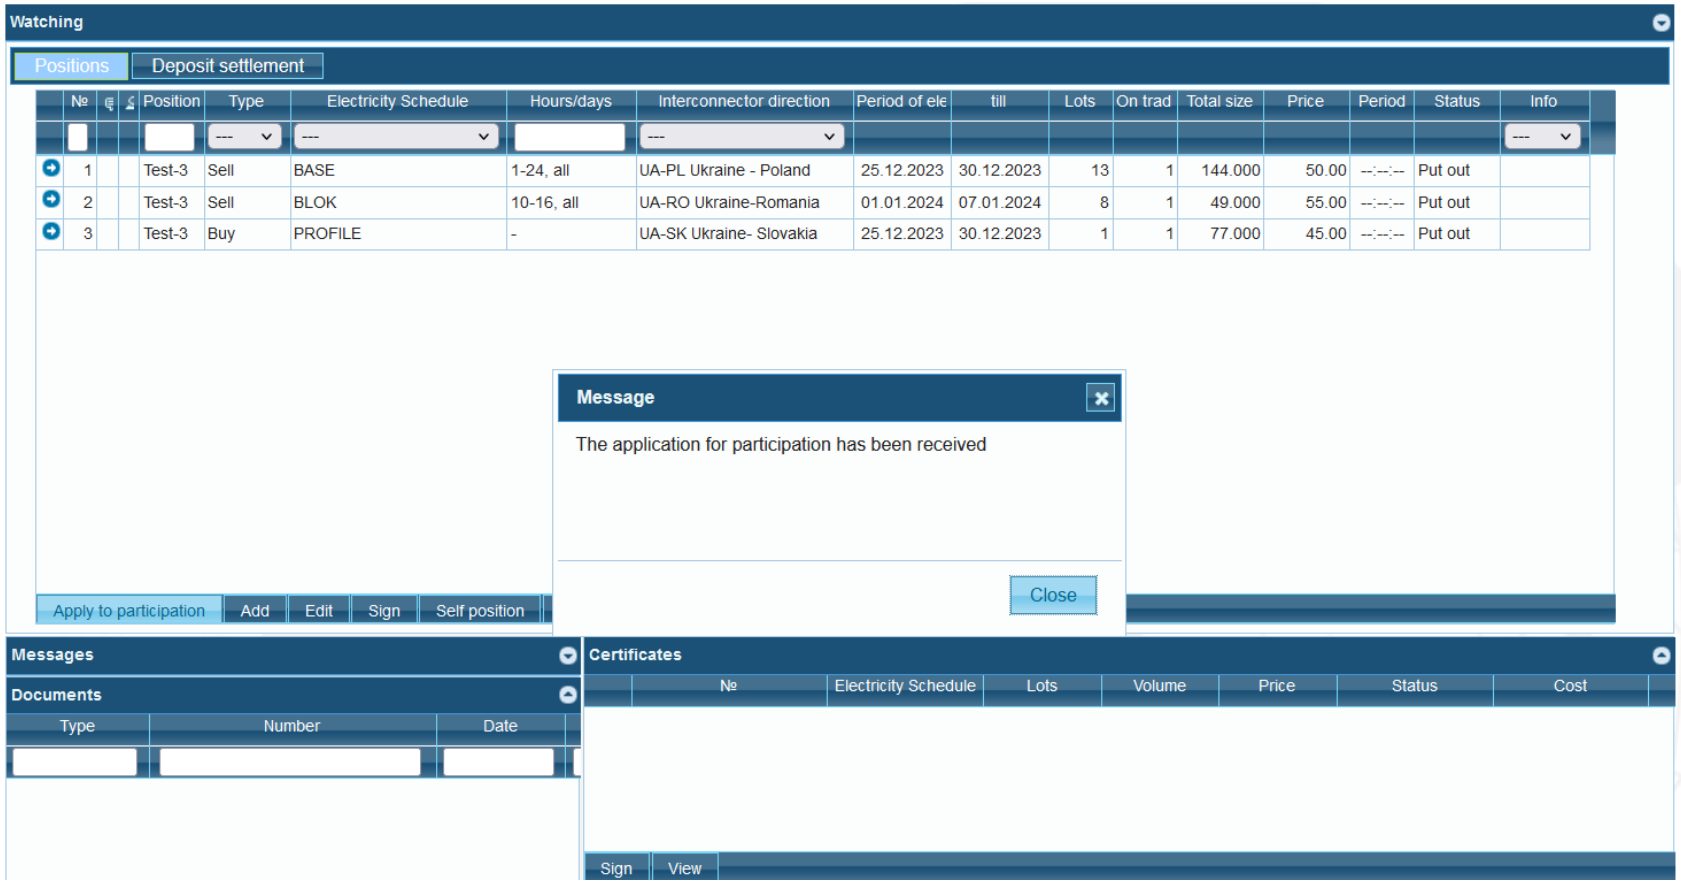

Registration of applications for participation in the auction

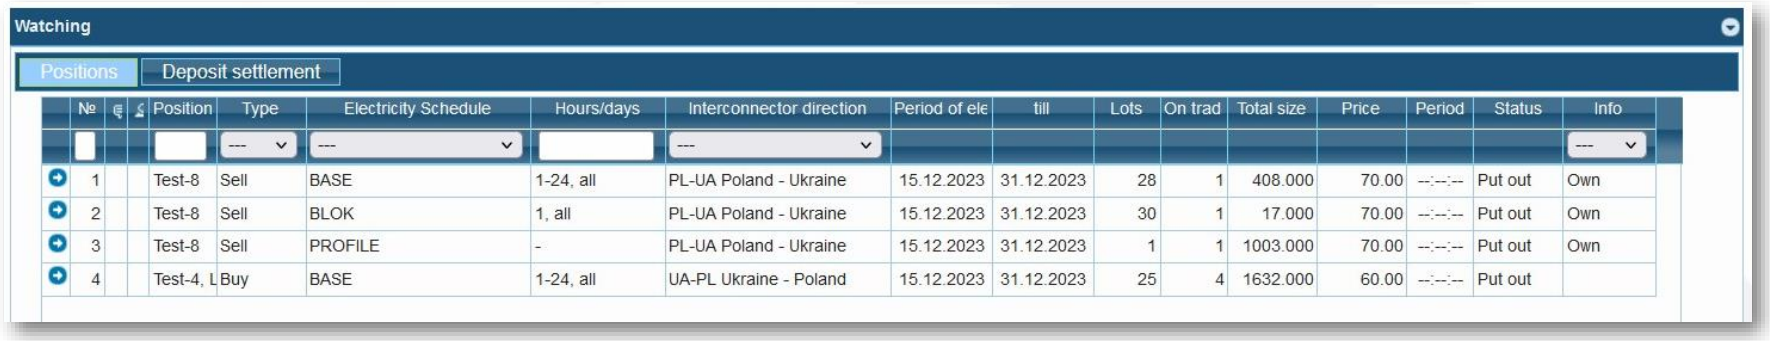

After publishing the auction announcement on its official website, the Auction Organizer starts registering applications for participation in the auction.

It is possible to register for the auction by clicking the "Apply to participation" button on the auction page.

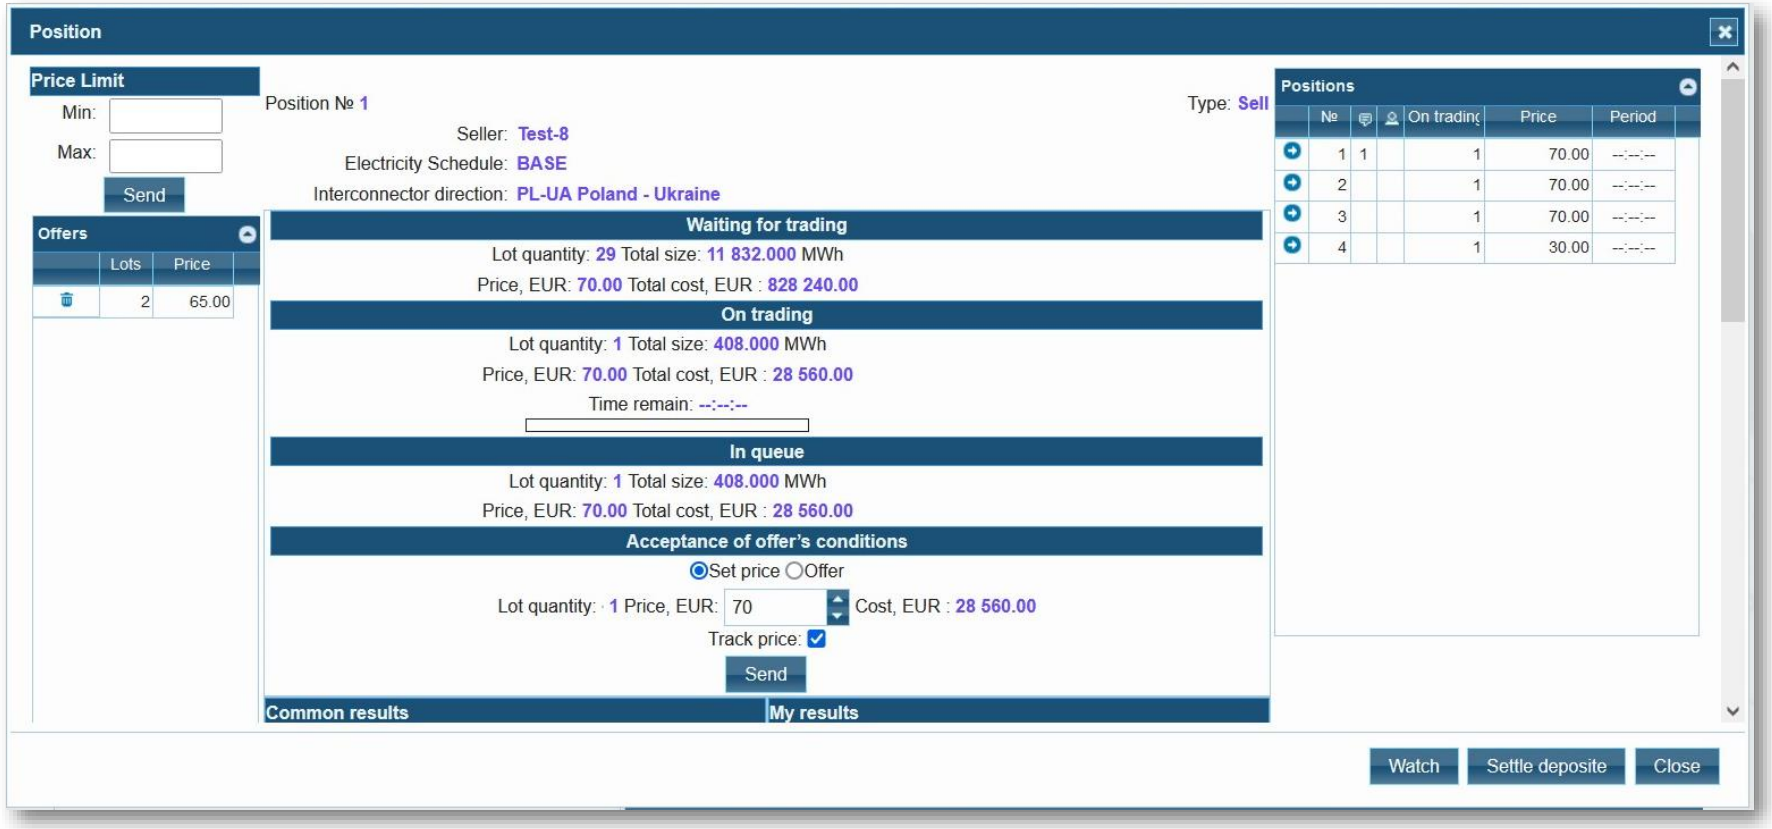

Trades (1/3)

To view complete information on a position, the user must click on the selection button on the left in the corresponding entry from the list.

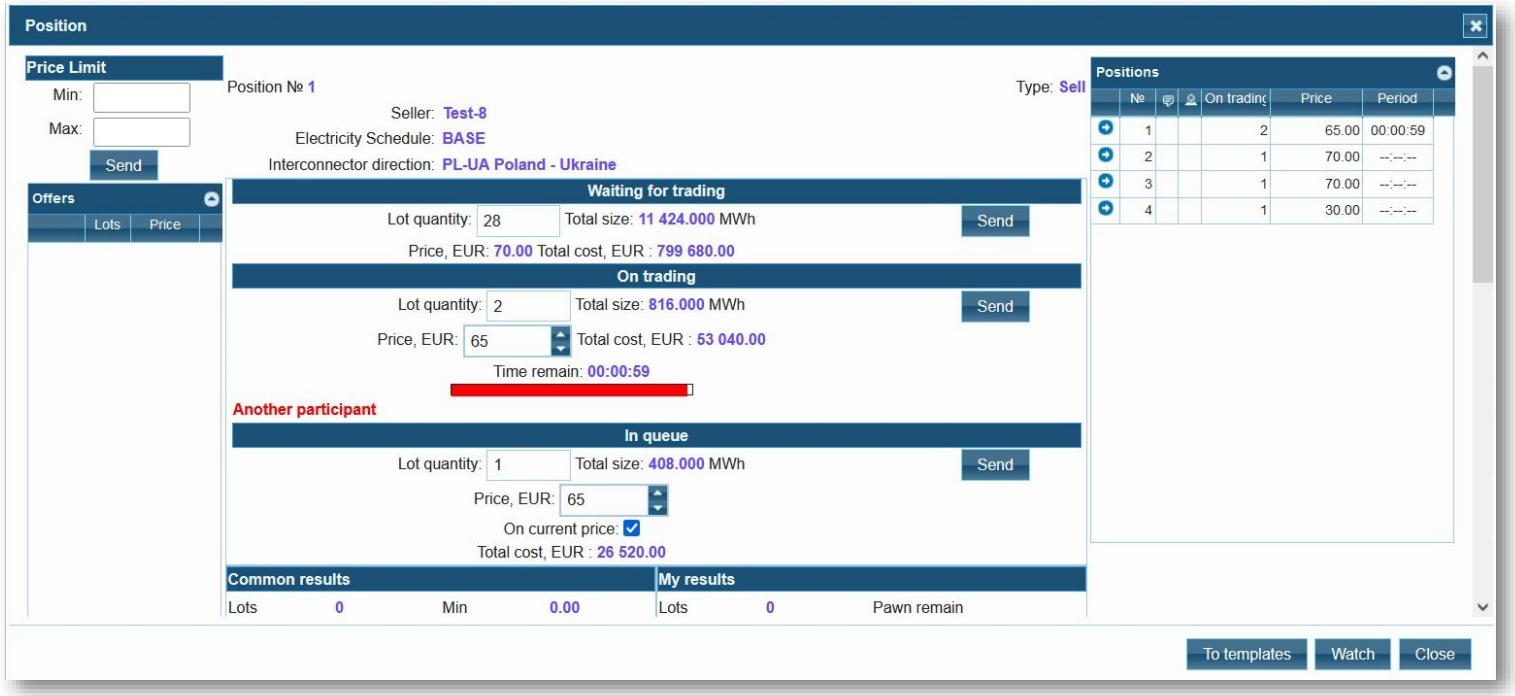

Here, the user has the opportunity to view brief information about the progress of trading in other positions (all or selected by him using filters) and, if necessary, make a quick transition to another position.

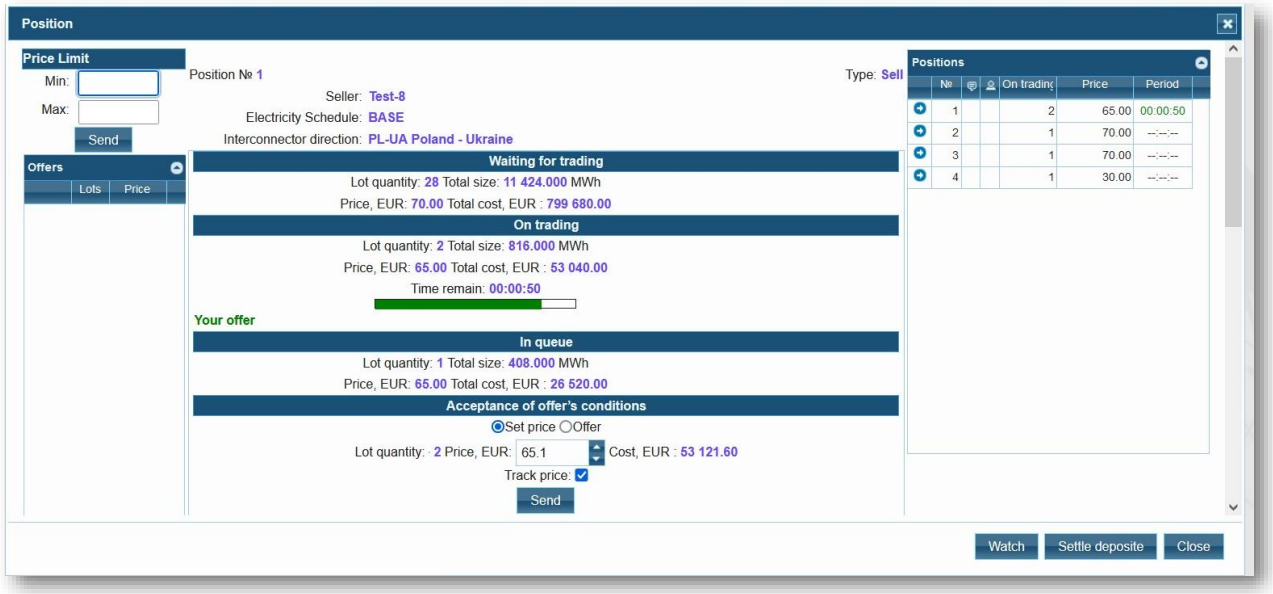

The auction is held for all positions simultaneously. The lots of each position are traded sequentially. Each subsequent identical lot is put up for auction at the closing price of the previous lot.

Trades (2/3)

During the "Tender" period, participants submit offers on the readiness to buy/one lot or a package of combined lots in a position on the conditions of the participant-seller.
The trade can take place both on an increase in price (in the case of an offer to sell) and on a decrease (in the case of an offer to buy).Participants can also make counter-offers with their own conditions.

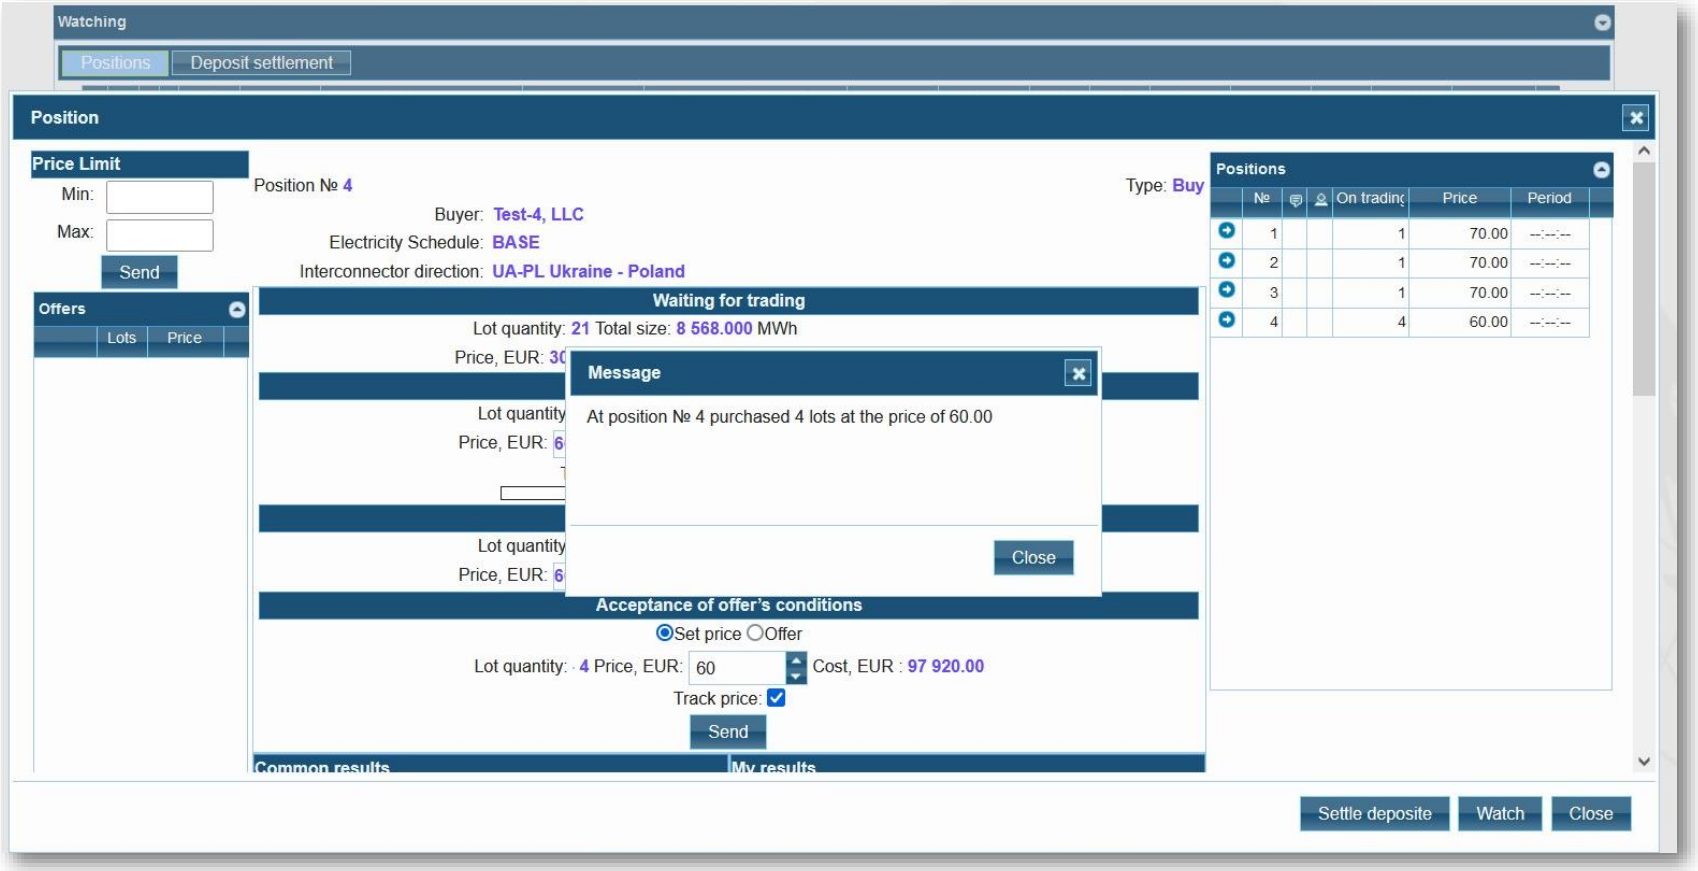

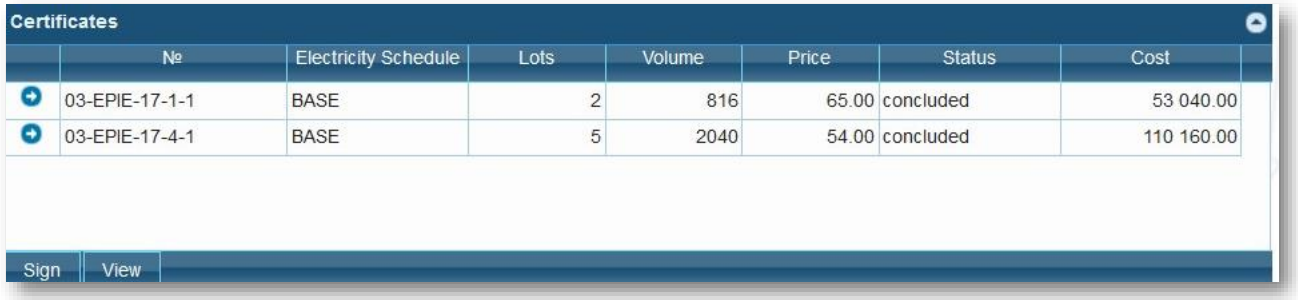

If the buyer submits an offer to buy a lot/package of lots from the position on the current terms or the seller accepts one of the buyers' counter offers, the countdown to the best offer starts. For the buyer whose offer is the best, the timeout for the best offer is displayed in green font and timer indicator.

Trading session(3/3)

PP BETS records the fact of concluding an agreement with the participant whose offer was the best (including the only one) at the end of the waiting time for the best offer.

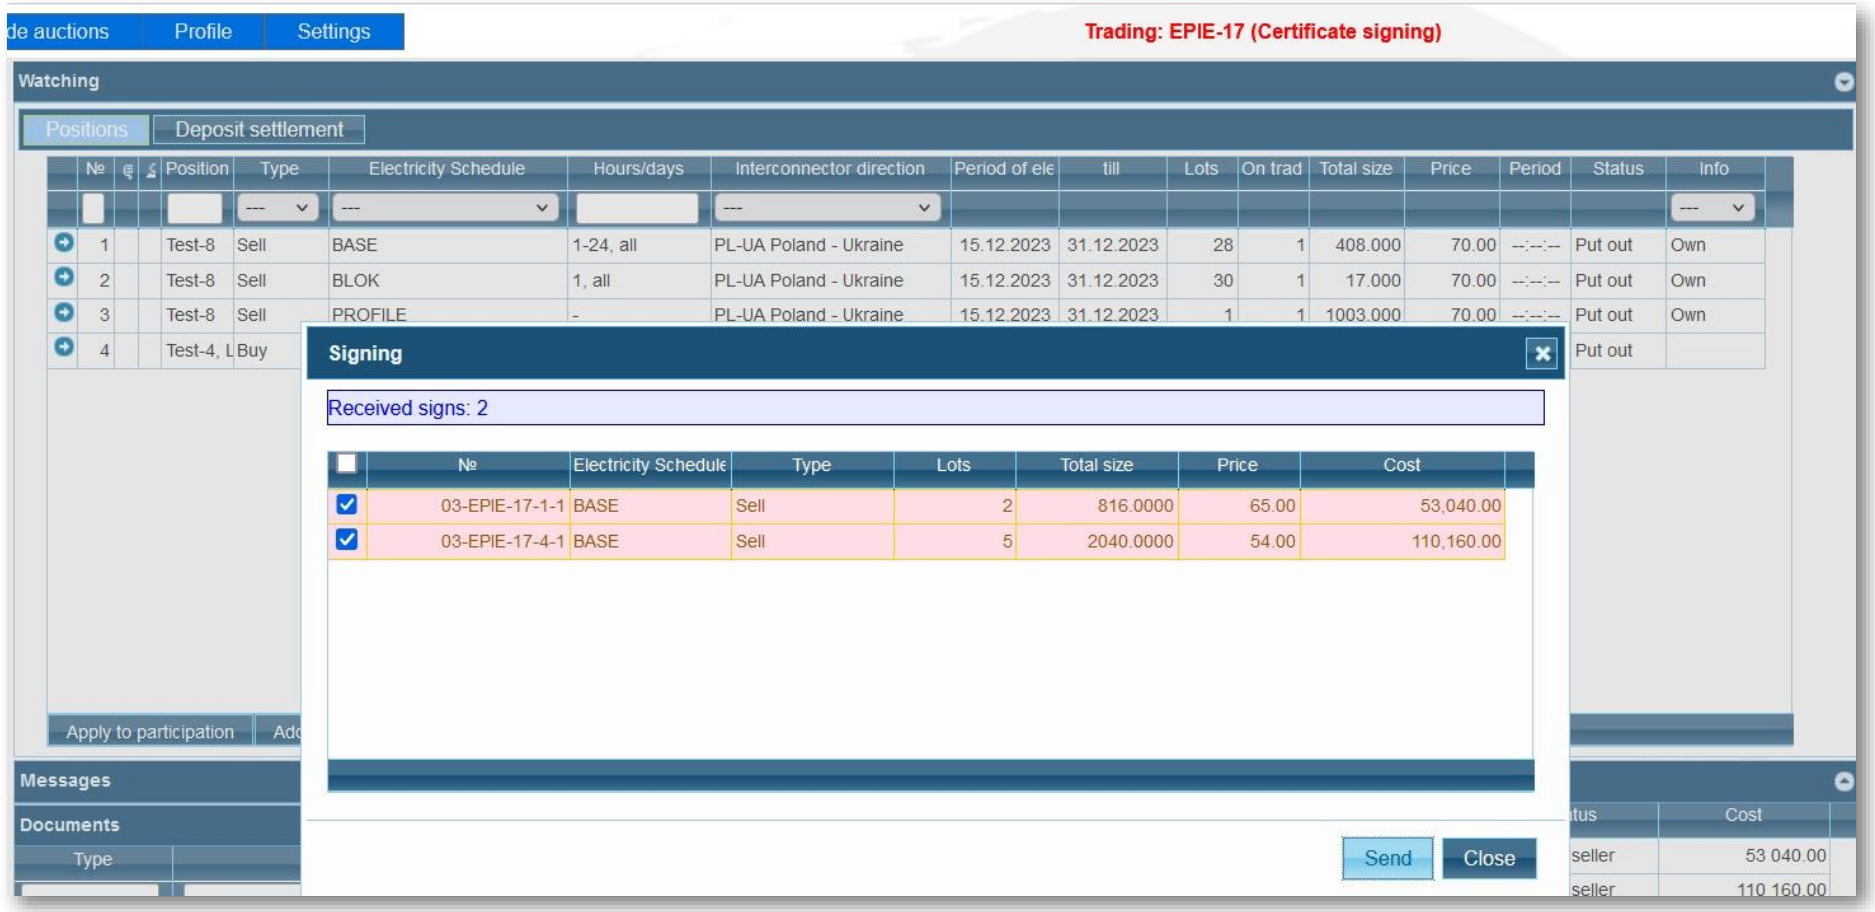

За результатами укладення угод система формує свідоцтва.

Signing certificates

The user has the opportunity to sign the auction certificates concluded by him at the auction in the "Trading" period, without waiting for the end of the corresponding period and the transition to the "Signing certificates" state, or directly in the "Signing certificates" period.

In the "Signing of certificates" period, PP BETS automatically forms in the "Documents" block: auction protocols, auction certificates and commission fee invoices.

The results of the auction are published by the exchange in public access.

Execution of agreements

1. On the basis of the auction certificate, the parties to the agreement during the period specified by the initiator in the position are obliged to conclude and sign an agreement for the purchase and sale of electricity for further import/export, according to the terms of which the seller is obliged to supply electricity, and the buyer to accept and pay for it The parties to the agreement are not subject to disclosure.

2. The terms of the sales contract must determine the procedure for purchasing capacity. In particular, on the borders where joint distribution operates (Romania, Moldova), agree on the party that will buy the crossing (for example, the seller). It is also recommended to provide in the templates of purchase and sale agreements that the parties are not responsible in the event of the impossibility of further purchase of capacity, and the agreement is terminated in this case.
3. Ukraine currently has permission to distribute capacity only at daily auctions. Contracting (D-2) will be less risky for participants.

4. The parties that violate the execution of the agreements will be removed from the exchange trading in the future.
